*Maximum Flexibility,
Minimum Cost*

FC-20 Drying Cabinet - Dries 6 sets of Turnout Gear

The B&C Technologies FC-20 Firedryer is especially designed for drying heavy duty overalls. With efficient and gentle drying action, the dryer can hold 6 sets of turnout gear making it a necessity for fire departments and other industries. The unique drying process dries the gear from both the inside and outside. Fans direct heated air over the outside of the gear while a second system dries from the inside, directing the air through specially designed hangers to the interior of the gear. The FC-20 dries with no mechanical tumbling action, extending the service life of the fabric, as well as the life of the zippers, reflective tapes and other components.

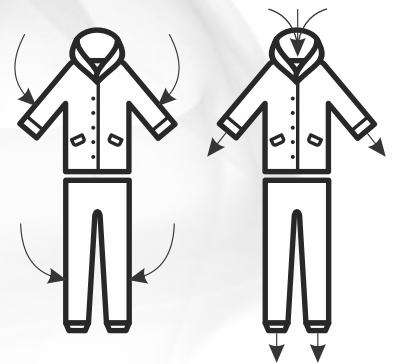

The large display provides information via symbols and text, keeping you up to date during the drying process. Three manual programs and three automatic programs, each with our unique Humidity Tracking System (HTS) measure the levels of humidity each second to determine exactly when the goods are dry. All programs meet NFPA standards and will not damage turnout gear. Programs can also be set for other garments and station wear.
